SUMMARY

Data analyst transitioning into data science with two years of industry experience delivering end-to-end analytics — from SQL pipelines and KPI dashboards to risk modelling frameworks. Leans toward interpretable models and honest evaluation metrics. Writes tested, structured Python. Interested in ML systems and analyses that answer the real business question.

TECHNICAL SKILLS

LANGUAGES	Python · SQL (MySQL, DuckDB)
DATA & VIZ	Pandas · NumPy · Matplotlib · Seaborn · Plotly · ydata-profiling · Tableau
ML	Scikit-learn · XGBoost · LightGBM · SHAP (explainability) · MLflow (tracking)
STATISTICS	Probability · Hypothesis testing · A/B testing · Linear algebra · SciPy
SQL PATTERNS	Window functions · CTEs · Stored procedures
TOOLING	Git / GitHub · pytest · Docker (basic)

EXPERIENCE

Data Analyst — HAS Motors

May 2022 — Jun 2023 · Novosibirsk, Russia

- Designed and deployed an automated **data pipeline** for sales and operations data, cutting reporting delays by **over 60%**.
- Built interactive dashboards in Excel and Python for sales, inventory and KPI tracking, enabling near real-time monitoring by management.
- Ran **customer segmentation and retention analysis** that informed more targeted, cost-effective marketing.
- Partnered with IT and logistics to surface inefficiencies; data-driven recommendations contributed to measurable gains in delivery efficiency and resource use.

Data Analyst & Risk Manager — New Generation LTD

Jun 2023 — Jun 2024 · Novosibirsk, Russia

- Implemented a comprehensive **risk-modelling framework** for financial operations, contributing to an **~18% reduction in operational risk exposure** and approximately **3.2M RUB in annual cost savings**.
- Built forecasting models and analyses that informed renegotiation of supplier contracts, improving procurement efficiency and cash-flow stability.
- Communicated findings to technical and non-technical stakeholders; mentored junior analysts and contributed to raising team analytical standards.

SELECTED PROJECT

Credit Risk Scoring — end-to-end ML pipeline

REPO github.com/.../credit-risk-scoring

Python | DuckDB | scikit-learn | XGBoost | LightGBM | MLflow | SHAP | pytest

- Built an end-to-end credit-default prediction pipeline on the UCI *Default of Credit Card Clients* dataset (30k customers, 22% default rate).
- Engineered features from 6-month payment history in **DuckDB SQL** — aggregating payment delays, bill amounts and utilisation ratios.
- Compared Logistic Regression, XGBoost and LightGBM with MLflow tracking; **LightGBM** reached **ROC-AUC 0.778 / Gini 0.556 / KS 0.432**.
- Explained model decisions with **SHAP**: global feature importance plus per-applicant local explanations.
- Hybrid structure: 3 narrative notebooks + reusable src/ package, covered by 15 pytest unit tests.

EDUCATION

Bachelor of Science in Computer Science and Technology

Graduated 2024

Zhejiang University of Science and Technology (ZUST) · Hangzhou, China
